

Fraxel treatment- for acne scarring

Acne problem is one of the growing problems in today's world. Just acne on face disturbs the people specially the artist who perform on stage. Several laser techniques are used in this regard that have helped in removal of face marks but Fraxel treatment is preferred by majority of patients.

Fraxel laser technology is the new, latest and effective treatment for acne removal. It treats the skin discriminately. It gently treats the thinner skin effectively. The laser reads the face pixel by pixel and then cures the damaged areas. With numerous of its benefits, like smooth skin and clarity, this treatment is emerging at fast rate.

The new and recent kid entering the world of laser therapies is Fraxel laser treatment. It is considered effective in removal of acne scars and in diminishing it deeply. It is approved by FDA and is practiced by majority of aesthetician experts and dermatologists around United States.

Capabilities of Fraxel Laser Technology

The important thing to know is what distinguish Fraxel laser Treatment from other laser treatments. The most important is that it leaves no red marks on the skin, which generally other treatments do. It does not leave the skin raw as recovery time has significantly been reduced.

It treats the skin discriminately rather than treating several layers all together. It is less invasive. It does not affect the healthy tissues but only removes the damaged tissues, thus helping the skin to heal up quickly and easily.

The work of Fraxel laser is compared with the picture of the face. When the picture is put under the microscope, you can see thousands of small pixels that make up the face. Fraxel laser treats the skin the same way, pixel by pixel and target the damaged areas.

Benefits of Fraxel laser

This laser treatment is considered gentle to other laser treatments. It treats the area with thinner skin like neck and face very gently. It can result in skin tightening along with smooth skin surface to alleviate acne scarring. The differences in picture viewed before and after the Fraxel treatment are highly impressive.

The following skin benefits are provided by the fraxel Decreased pore size Unnoticeable pores Smoothing of wrinkles Cleaning of scars
Improvement in textures Smooth skin Reduced brown spots Less skin discoloration Good skin tone More clarity
